

Slush Machine

BEFORE YOU BEGIN

1. Make sure to check machine for any leaks. You can do this by putting a small amount of water into each side of the hopper.

TIPS FOR TROUBLE-FREE OPERATION

1. Add mix into each side of the hopper. Do not fill beyond maximum level.
2. Press on power switch to start machine.
3. Turn on switch to ice symbol.
4. Wait 40-60 minutes for slush to be made (the speed depends on liquid temps).

TIPS

1. Keep premixed products in the refrigerator or cooler to reduce the time it takes to make it slushy.
2. Do not add frozen mix.
3. Keep product higher than the auger.
4. Humidity may cause sweating on the machine.
5. Do not allow the exposed chiller tube to freeze up. Refill at this point.
6. Allow product to warm up by switching to chill when done.
7. If unable to use house plug in, plug directly into outlet and use our extension cord.
8. If making alcoholic drinks, please remember that alcohol will not freeze.

CLEANING INSTRUCTIONS

1. Please rinse out the machine. You do not have to wash.
